

# Stakeholder Notice

## ECP PLBB – MSB 5 Shutdown – Air Handling Units

STK-N I-254  
Date 26 May 2026

### MSB 5 Shutdown

## Location

The works will be conducted at MSB #5 within the L1 plantroom at the ITB.

## Scope of Works

As part of the ECP PLBB Project a new smoke damper will be installed within the new Duty Free office. To facilitate the electrical connection of the new smoke damper, MSB #5 is required to be shutdown.

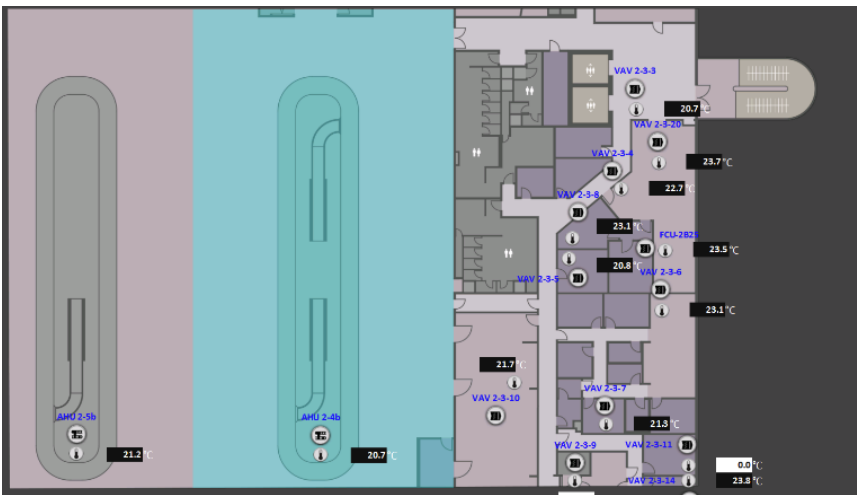

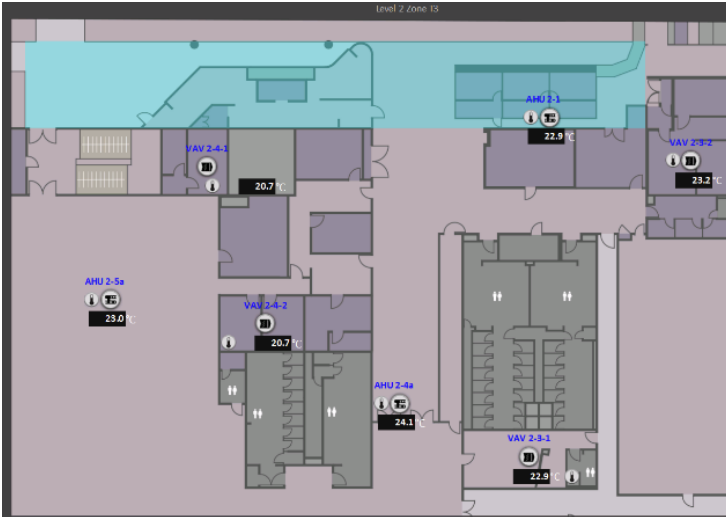

## Impacts

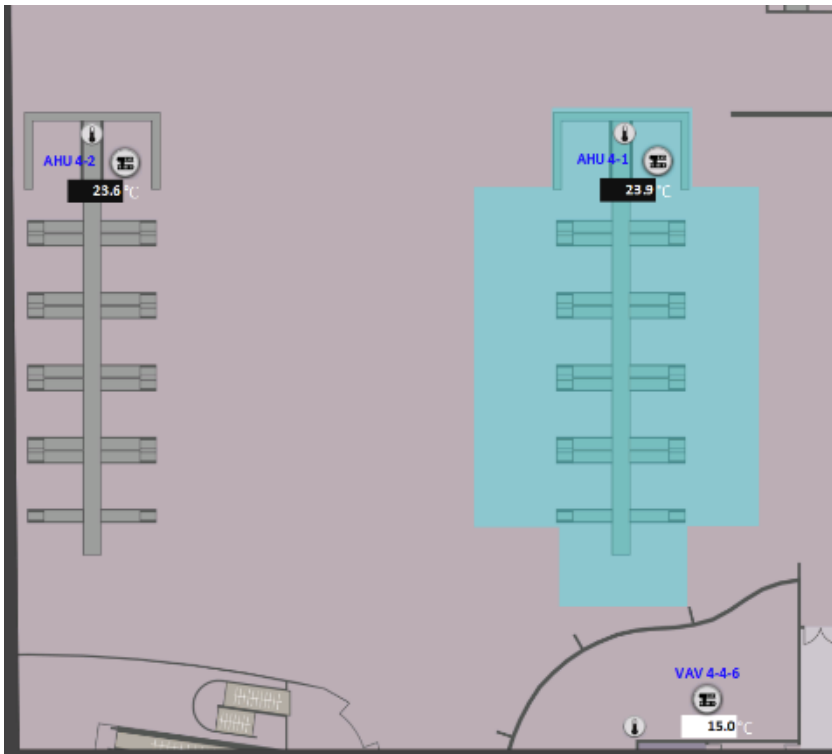

The shutdown of MSB #5 will take a maximum of 2 hours. During this time, several air handling units and associated HVAC equipment will be offline across levels 1, 2, 3 and 4. To minimise impact on staff and passengers, the shutdown will occur at 23:45 when there will be minimal people within the terminal and the heat load will be low. This will also allow sufficient time for the system to reach the correct temperature following the works and prior to the first arrival on Thursday 28<sup>th</sup> May.

The below equipment will be impacted by the MSB shutdown.

- AHU 1.1, 1.2, 2.1, 2.3, 2.4, 2.5, 2.8, 4.1
- RAF 2.1, 2.3, 2.4, 1.4, 2.5, 2.8, 4.1
- VF3.1, SEF 8, SEF 9, SEF 10

The main impacted areas are shown in the following images taken from the BMS (blue highlighted sections).

## Timing

The works will commence from 23:45 on Wednesday 27<sup>th</sup> May to 01:45 on Thursday 28<sup>th</sup> May 2026.
